

THE MEETING PLANNERS DREAM CONNECTED TO iMIS

Stova is a system loved by event professionals around the world. But how do you get your users from iMIS to Stova, and make sure that someone is paying the right price for their registration and then get that registration information back into iMIS?

Connect for Stova is the answer.

With versions for clients on iMIS 2017 and iMIS EMS, Connect for Stova allows your users to use the details you already hold about them to charge them the correct price and populate their registration record with their iMIS profile information. You're then able to use all the power of the Stova registration platform to build the registration workflow you need and utilise all the power of the other Stova modules for building and managing your event.

When the registration is complete it's written back to iMIS allowing you full reporting and analysis of your events.
